

Mustang Dynamometer now offers new PowerDyne controls conversion kits for all Dynocom and Dynojet eddy current dynamometers are now available. Included with the conversion kit is a new Mustang PowerDyne controller and the latest version of PowerDyne Software, new dual hall effect speed sensors, a new 60 tooth speed gear, a new strain gauge load cell, new power cable, and a new dyne harness cable set. Upgrading your Dynocom or Dynojet dyno to the latest Mustang PowerDyne controller is an economical way to breathe new life into outdated technology and take advantage of all of the advanced simulation capabilities that Mustang's PowerDyne makes available.
